Projects

Personal Blog

<https://axxellanceblog.com>

Built using Next, HTML5, CSS3, and JavaScript is my personal blog. Before choosing Next, I constructed this blog using two different stacks of PHP, and it works fairly well for me. For the backend, I use Directus, a headless content management system that is hosted on my VPS. To bring it to its current state took me two to three months, and the process was a useful learning experience.

Nigeria Bank USSD Code

<https://playstore.com/click-here>

A straightforward smartphone app called Nigeria Bank USSD Code is available on Google Play and has the ability to connect to a self-hosted API and transmit a list of all Nigerian banks together with their USSD codes, including both commercial and non-commercial banks.

Portfolio

<https://mc-stephen.ml>

I have made two different portfolios in the past, but this one seems to outperform them all in terms of design and user experience. This is not my first portfolio, but it is my current one. I only used HTML5, CSS3, and JS to construct this, so far I haven't seen a reason to update it, but there is still opportunity for development.

MX File Manager

Coming soon!

I use flutter for some while now and i decided to check how far i could develop mobile app considering the speed and performance in mind, so I decided to build a file manager app for android, thought this app is still in development but the outcome so far has been promising.

Facebook clone

<https://get-source-code>

One of the coolest thing I've ever done was creating a Facebook clone, which I made while I was first learning PHP in the year 2020(not really sure of the year). It was made with a rudimentary web stack and relies largely on PHP (5 & 6); as a result, it might be buggy.

Online Quiz

<https://online-quiz.com>

The design of an online test I made using HTML 5, CSS 3, and JavaScript, the design was provided by front-end mentor when I was still honing my web design skill. It is included here on my resume because I find it worth sharing. The list of question and their answer can be added to a simple JSON file.

Rock-Paper-Scissor Mobile Game

<https://playstore.com/rps>

A simple mobile game app created with Flutter & Dart. The design file was gotten from front-end Mentor while I was still practicing on my flutter skills. It was an opportunity to learn routing and set-state in flutter including other things.

Interests

Gaming, coding, reading, watching movies
blogging, creating YouTube video

Skills

Programming Languages

JavaScript (ES6), TypeScript, PHP, CSS3, GraphQL, Dart, HTML5

Libraries & Frameworks

jQuery, Ajax, React, Next, Flutter, Scss

Databases/Querying

SQL, MySQL, Hive, SQLite

Tools & Platforms

Git, Netlify, Heroku, Appwrite, WordPress, Docker, Scrapy, Firebase, GitHub, Directus

Design

Adobe XD, Figma, Photopea

Education

Moshood Abiola Polytechnic

2018 - 2020 // Nigeria, LG

- ▷ National Diploma in Computer Engineering
- ▷ Learn the basic of data structure & algorithm

Relevant Experience

Web Developer

@ Freelance (Contract)

April - Aug 2020 // USA, Null

- ▷ Build a full day-dare web platform for an international client with 100% client satisfaction
- ▷ Interfaced with client on weekly basic, providing technological expertise and knowledge

Flutter Developer

@ Compuclick Software Ltd

Jan - Dec 2022 // Nigeria, LG

- ▷ Worked alongside team of developers to create a mobile based platform
- ▷ Translation of wire-frames and rapid prototyping tools to accurate, working code
